

- Text description of your overall concept for a portfolio

My overall concept will be rather simple in design and color scheme. However, it will have many elements to demonstrate my skills. Since I will be seeking to find employment as a developer and not as a designer this will fit well.

- Text description of your approach to technology and building the portfolio

Since I already have a GitHub profile page set up linking to my domain that is where I will start. I will start will have the general layout build with my name and picture first. Then I will have some of my project displayed followed by my contact information. I might build this all in an app to demonstrate this skill.

- Personal statement you will use in your portfolio

I am George Beck, a military veteran currently pursuing my education in Web Development. As I continue to refine my technical skills as a Frontend Developer, I will rely on the expertise instilled in me to manage change, crisis, and diversity in the workplace. I will be an asset to any organization I come to by leveraging my talents for HTML, CSS, and JavaScript to create responsive and imaginative technologies for the Web

- List of projects you will feature in your portfolio (in addition to your Capstone Project) with brief descriptions you will use in the portfolio
 - Capstone project
 - Embedded media project
 - Weather app project
 - CSS project
 - Dom manipulation project
- List of third party profiles you intend to link in your portfolio with URLs
 - LinkedIn
 - GitHub
 - Link to my ORGL portfolio
